

In Floor Dry Basket Arrestors®

Arrest the solids at the source using the “New” IN-FLOOR DBA’s®

The **Drain Guard In-Floor DBA®** range are the most effective products available for the removal of solid waste from waste water. The products are highly regarded by Trade Waste Authorities & EPA Bodies and are being specified by Hydraulic Consultants throughout Australia. The uniquely designed Australian waste drainage fittings channel waste through a dry basket arrestor and significantly reduce the amount of solids (food debris or other foreign materials) entering our sewerage systems from commercial and industrial facilities.

Why Install A Dry Basket Arrestor?

- Meet and exceed city/shire council pre-treatment requirements
- A guarantee of pre-treatment on the premises.
- Reduce frequency of grease trap pump-outs and associated costs
- Reduce costs associated with BOD, COD, TSS and water quality
- Reduce blockages and drainage maintenance costs
- Improve performance of grease and oil separation systems
- Improve grease trap performance and longevity
- Promote better hygiene and work practices in kitchens
- Safeguard the environment and sewerage infrastructure

Drain Guard In-Floor DBA™ features:

The filtering basket of Drain Guard is concealed under a hinged grate cover. The secured grate cover is strong and capable of carrying all the heavy loads likely to be encountered on commercial or industrial premises.

The mesh basket contained in the DBA is constructed using heavy duty stainless steel. The basket is easily removed to allow for simple emptying, cleaning and replacement.

To ensure that all materials being passed through the waste outlet fitting will be strained by the basket a “shut-off” valve has been fitted below the basket. This valve automatically shuts off the flow stream through the waste outlet fitting as soon as the basket is removed—the fitting cannot be operated as a waste outlet without the basket being in place.

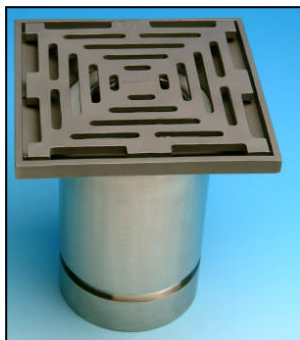

All Vinidex Dry Basket Arrestors have been independently assessed by Ecospecifier and included on their list of health and environmentally preferable materials and products. In addition Ecospecifier has determined that these products may contribute to Green Star credit points. Visit www.ecospecifier.org for further information.
